

# MagFlux®

## ELECTROMAGNETIC FLOW METER

3.05

### General

MagFlux® Electromagnetic Flow Meters deliver very stable and highly accurate flow measurements in conductive liquids.

MagFlux® Flow Meters have no moving parts to create hydraulic influence on the flow, use a well-proven technology, and communicate using a standard protocol.

MagFlux® Flow Sensors are available in sizes ranging from DN 15 to DN 2000, with standard construction lengths and connections.

MagFlux® Flow Meters can be installed either with the converter mounted on the flow sensor, on a wall or mounted in a panel.

### Features

- One graphic Display can operate up to 4 MagFlux® Flowmeters
- Intuitive menu structure with easy navigation
- Built-in datalogger with the display
- Large dynamic measuring range with an accuracy of up to  $\pm 0,25\%$
- Two dynamic batch counters and password protection
- Counters and pulse output with or without reset
- Modbus® communication is utilized between the display and flow converter and to other external devices
- 4-20 mA output for flow in one or both directions
- Detection of empty pipe
- Automatic electrode cleaning
- Full bore bi-directional sensor

### Application

MagFlux® Flow Meters are used for measuring and totalizing flow of conductive liquids in pressurized closed pipe systems.

MagFlux® Flow Meters measure flow in both directions of potable water, waste water and process fluids.

### DATASHEET

EN 3.05 MAGFLUX DATASHEET 1608

# MagFlux™ Electromagnetic Flow Meter

## Function

The MagFlux® operation is based on Faraday's law of induction. When a conductive fluid passes through a magnetic field in the sensor, an electromagnetic voltage is induced between the two electrodes in the flow sensor tube. This voltage (E) is directly proportional to the fluid velocity.

When the internal diameter of the Flow Sensor is known, the actual volume is calculated by the Converter.

The electromagnetic voltage induced between the electrodes equates to:

$$E = L \times B \times V \text{ where:}$$

- E: Induced electromagnetic voltage
- L: Flow sensor diameter
- B: The strength of the magnetic field
- V: The velocity of the liquid

The voltage E is measured and consequently converted to a volumetric flow.

## Flexible Installation

MJK's modular design is versatile. The Display Unit can be mounted up to 1000 m from the Flow Converter with ordinary twisted wires. It also provides options for mounting the Converter where it is most convenient to make the electrical connections.

One Display Unit can control up to 4 Converters and Flow Sensors for greater economy, space savings and an improved overview of the multiple measurement values

The MagFlux® Converter and Display Unit mounted directly on the Flow Sensor.

The MagFlux® Converter mounted directly on the flow sensor with a remote mounted Display Unit.

The MagFlux® Converter and Display Unit remote mounted. For example when the sensor is being buried or submerged.

The MagFlux® Converter is mounted remote from the Flow Sensor, and the Display Unit is mounted separately from the Converter. E.g when the Sensor is being buried

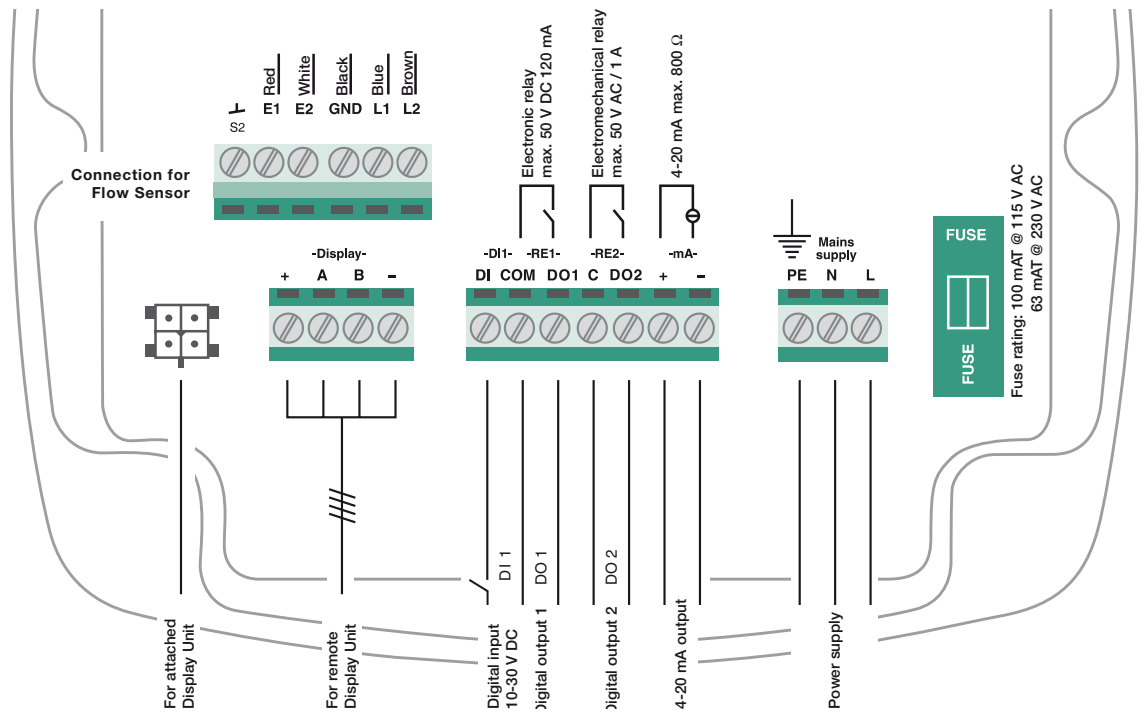

The MagFlux® Converters are mounted directly on the Flow Sensors, while the remote mounted Display Unit communicates with two MagFlux® Converters and Flow Sensors.

# MagFlux™ Electromagnetic Flow Meter

Simple to Operate	The MagFlux® Display Unit has many unique and intelligent functions. It has a simple menu structure and can display text in several selectable languages in metric or English units.	
Registering the Flow Sensor	The MagFlux® System registers the Flow Sensor to the Converter using a unique coded sensor. It sets calibration data, the nominal diameter and the sensor configuration - making the MagFlux® System ready to measure immediately. This avoids complicated and sensitive field calibration and delicate electronics in the sensor, and allows unlimited interchanging of MagFlux® Converters and Flow Sensors.	
Counters for Flow in Both Directions	The MagFlux® Converter has resettable and non-resettable counters for flow in both directions.  MagFlux® has two batch counters with smart-batch counting.	
Forward and Backwards Flow Measurement and Totalizing	The MagFlux® System measures flow in both directions and can totalize the net flow for both. A simple menu selection determines the primary flow direction.	
Data Logger	The MagFlux® built-in 32 MB data logger can log up to 345,000 entries with time and date. Data is displayed graphically, but can also be exported to a PC via the USB port on the Display Unit.	
Field Link Easy-to-use software	The MagFlux® PC connection allows exporting logged data to a PC, and importing new software updates. All through intuitive steps using a common USB port.	
Flexible In- and Outputs	The MagFlux® Converter has one 4-20 mA active analogue output, two digital outputs and one digital input. The digital input can stop and zero counter settings or control the batch counters manually. Each alarm can be displayed as a pop-up alarm until they are reset.	
Automatic Electrode Cleaning	The MagFlux® built-in electronic electrode cleaning system is always active.	
User Definable Text	The MagFlux® display can be configured by the user for up to five lines of text. The graphic display is automatically adjusted to show the largest characters possible.	
Modbus® Communication	The display and converter uses Modbus® communication protocol for internal and external communication.

## Accessories

579035  
MagFlux®  
Gel potting kit  
f/ sensor IP68

MagFlux is supplied as standard with protection class IP67. However, if you use our gel potting kit, you can increase the protection class to IP68 (which means that MagFlux sensor can withstand constant submersion in water (max. 10 m water column pressure).

207932  
Steel Cover for Field  
cabinet (small)

Stainless steel protective cap and fittings set. Protects MagFlux, Oxix and SuSix from falling objects, branches, etc. Stainless steel (SS316)

200242  
Mounting plate,  
Field Cabinet (small)

Makes it possible to fit converter to an uneven surface. Mounting plate is compatible with universal bracket. Can also be used to mount converter on pipe or stand.

207935 Panel  
Mounting Bracket for  
MagFlux®, SuSix® &  
Oxix®

Bracket specially designed for narrow or wide converter cabinet. For fitting cabinet in panel front

500220/500221  
Cover for Field Cabinet  
(small) Transparent/  
Opaque

Protects MagFlux display from strong sunlight/rain/contact.

205546  
Modbus & RS 485  
communications  
module

To communicate with an external Modbus® network. For mounting in the MagFlux display. The MJK Modbus® communication module separates the internal network from the external network, e.g. to a PLC. The module can transmit data from 4 interconnected MJK transmitters.

205547  
Profibus  
communications  
module

To communicate with an external PROFIBUS® network, we supply a Profibus DP module suitable for mounting in the MagFlux® display. The MJK PROFIBUS® communication module can transmit data from 4 interconnected MJK transmitters.

205910 mA-Bus  
Converter

The MJK mA-Bus converter is used to convert mA signals to Modbus®. measured value can be displayed on e.g. a MagFlux Display.

207980  
MagFlux® Verificator

MagFlux Converter Verificator, simulates the coil and electrode functions of the MagFlux sensor for testing of the readings at zero and high flow rates on the converter.

207937  
Surge Arresters for  
MagFlux®

Surge arresters to protect converters and displays from lightning transmitted in pipes.

691080  
Cable for  
MagFlux® sensor

(2x2+1) x 1.0mm<sup>2</sup> (AWG 18/19)  
Colours: red, white, blue, brown, black PUR

691095  
USB Cable

PC Mini USB/USB Cable

## Specifications Converter and display unit

Display	
Display	Graphic background-lit LCD-display (64 x 128 pixels) with soft keys
Display Indication	Indication of flow , flow direction, volume, totalizers, configuration and graph
Power Supply	From MagFlux Converter
Clock	Real-time clock with built-in lithium battery (lifetime 10 years@20°C)
Communication	MODBUS® RTU-mode, 9600 baud, 2-wire RS 485, master-mode
Interface	1 pcs. RS-485 Modbus® RTU-mode 1 pcs. USB 1,1 type mini B, female 1 pcs. for Communication module
Memory Storage	32 Mb Flash memory, 345.000 loggings incl. date, time and value (curve display)
Enclosure Rating	IP 67, NEMA 6
Material	Housing: Glass-reinforced Polycarbonate Protection Lid: Transparent Polycarbonate
Temperature Range	- 20 ... 60 °C / -5 ... 150°F
Operating relative Humidity	Max. 85% Noncondensing
Weight	0,5 kg / 1.1lb

Converter	
Accuracy	+/- 0,1% of reading
Repeatability	+/- 0,1%
Min. Liquid Conductivity	≥ 5 µS
Power Supply	24 V AC, 50 / 60 Hz ± 10 % or 230 (115) V AC, 50 / 60 Hz ± 10 % or 10-30 VDC
Power Consumption	Max. 10 W
Internal Communication	MODBUS® RTU-mode
External Communication	MODBUS® RTU-mode, 9600 baud, 2-wire RS 485, slave-mode
Interface	1 pcs. RS 485 for connection to Display Unit or PLC
Analog Output	1 pcs. Active 4 - 20 mA, galvanically isolated, 12 bit resolution, (max. load 800 Ω) Min. range = 0 - 0,2 m/s (0-0.6ft/s), Max. range = 0 - 10 m/s (0-30ft/s)
Digital Outputs	1 pcs. Voltage-free electromechanical relay (max. 50 V DC / 1 A) 1 pcs. Optically isolated MOSFET relay (max. 50 VAC / V DC / 120 mA) Programmable for: Totalizer counter, batch counter, high/low flow , system error, empty pipe and flow direction.
Digital Inputs	One, max. 30 V DC, < 5 V DC = 0 (low ), > 10 V DC = 1 (high), pulse length > 100 ms
Enclosure Rating	IP 67, NEMA 6
Material	Glass-reinforced Polycarbonate
Temperature Range	- 20 ... 60 °C / -5 ... 150°F
Weight	1,0 kg / 2.2lb
Approvals	cUL CE approvals EN 61000-6-4:2007-02-14, EN 61000-6-2:2005-09-08

Connection Box	
Enclosure Rating	IP 68, NEMA 6X (using gel potting kit part no. 579035). The flow meter can withstand unlimited immersion of up to 10 m of water.
Material	Glass-reinforced Polycarbonate
Temperature Range	- 20 ... 100 °C / -5 ... 212°F

# MagFlux™ Electromagnetic Flow Meter

## Magflux® 7100 Sensor

The liner of MagFlux® 7100 is PTFE which makes it extremely low degree of friction and at the same time very resistant to chemicals and general abrasion.

## Applications

- MagFlux 7100 with Teflon® lining is commonly used for water applications with chemicals

## Specifications MagFlux® 7100 Sensor

MagFlux® 7100 Sensor Specifications	
Mounting Flanges ⑥	EN-1092-1 / ANSI B 16.5 / AWWA C207-01 / AS 4087 / AS2129
Built-in length	Standard length according to ISO 13359
Accuracy ④	Better than $\pm 0,25\%$
Ratio	1:100
Measuring Frequency	1,25-2,5 Hz
Materials	
Housing ⑥	Carbon steel
Flanges ⑥	Carbon steel
Measuring Pipe	Steel 1.4301 / AISI 304
Lining	PTFE (Teflon®)/PFA
Electrodes ③⑤	Steel 1,4571 / AISI 316 TI
Coating	3 layers Polyurethane paint, Thickness $\geq 310 \mu\text{m}$
Temperature range	
Medium temperature	-20...150 °C / -4...300 °F
Ambient temperature: Compact Converter	-10.....60 °C / 15..140 °F
Remote Converter	-20...100 °C / -4...212 °F
Enclosure	IP 67, NEMA 4, Standard IP 68, NEMA 6P (10mWc, using the Gel potting kit 579035)
③Options: Hastelloy C4, platinum, and titanium. See, Flow sensor Ordering information.	
④Of measured value.	
⑤Incl. built in ground electrode.	
⑥Also available in Steel 304/316 SS. See, Flow sensor Ordering information.

# MagFlux™ Electromagnetic Flow Meter

Magflux® 7200  
Sensor

The liner of MagFlux® 7200 is Hard Rubber for general water purpose usage.

Applications

MagFlux® 7200 with Hard Rubber lining is used typical for water and waste water applications.

Specifications  
MagFlux® 7200  
Sensor

MagFlux® 7200 Sensor Specifications	
Mounting Flanges ⑥	EN-1092-1 / ANSI B 16.5 / AWWA C207-01 / AS 4087 / AS 2129
Built-in length	Standard length according to ISO 13359
Accuracy ④	Better than $\pm 0,25\%$
Ratio	1:100
Measuring Frequency	1,25-2,5 Hz
Materials	
Housing ⑥	Carbon steel
Flanges ⑥	Carbon steel
Measuring pipe	Steel 1.4301 / AISI 304
Lining	Hard Rubber
Electrodes ③⑤	Steel 1,4571 / AISI 316 TI
Coating	3 layers Polyurethane paint, Thickness $\geq 310 \mu\text{m}$
Temperature Range	
Medium Temperature	-10...80 °C / 15...175 °F
Ambient temperature:	
Compact converter	-10...60 °C / 15...140 °F
Remote converter	-10...80 °C / 15...175 °F
Enclosure	IP 67, NEMA 4, Standard IP 68, NEMA 6P (10m Wc, using the Gel potting kit 579035)
Approvals	MID, EN 1092-1 DN 25 to 400 , WRAS
③ Options: Hastelloy C4, platinum, and titanium. See, flow sensor ordering information. ④ Of measured value. ⑤ Incl. built in ground electrode. ⑥ Also available in Steel 304/316 SS. See, Flow sensor Ordering information.

# MagFlux™ Electromagnetic Flow Meter

General  
Magflux® 7300  
Sensor

The liner of MagFlux® 7300 is PTFE which makes it extremely low degree of friction and at the same time very resistant to chemicals and general abrasion.

Applications

MagFlux® 7300 with Teflon® lining is used typical for chemicals applications.

Specifications  
MagFlux® 7300  
Sensor

20mA output is factory preset to Qmax

To calculate the correct size of the Flow Sensor the recommended flow velocity should be between 1 and 3 m/s (3 and 10 ft/s) to achieve high accuracy at low velocities (down to 0,2 m/s equal to 0.66 ft/s), to ensure safe operation of the tube system and to minimize pressure losses.

The flow curves and graphs on the following page illustrate how the size of the Flow Sensor is calculated to get the required measuring accuracy.

### Example:

A volume of 50 m³/h (220 GPM) is running through a DN100 pipe that measures 4" in internal diameter. To select the correct MagFlux® Flow Sensor, the liquid velocity should be in the range 1 - 3 m/s for 50 m³/hr (3 ft/s - 10 ft/s for 220 GPM.)

If a MagFlux® Flow Sensor with the same inner diameter as the DN100 pipe is selected (4"), the flow velocity will be 1.5 m/s (4.9 ft/s) at a flow rate of 42 m³/h (200 GPM). The diagram and the table below also shows that a flow between 5.65 m³/h and 283 m³/h (24.87 and 1.246 kGPM) can be measured.

## Flow / Velocity Graph (metric)

Nominal diameter of MagFlux® flow sensor

## Measurement Accuracy

### Example:

If a 100 mm MagFlux Flow Sensor is selected, the diagram shows the available measuring accuracy between 0.2 - 10 m/s or 0.6 - 30 ft/s (here: 0.25%).

## Reducing the Flow Meter Size

When the size of the Flow Meter is reduced to cause the flow to reach a sufficient velocity, the pipe size has to be reduced. This will cause a pressure loss which can be calculated using the pressure loss chart at the right.

When the MagFlux® Sensor is smaller than nominal pipe diameter, the pressure loss can be checked, using the pressure loss chart.

## Reducing the Flow Meter Size

A MagFlux® Flow Sensor with an internal diameter of 80 mm is selected and the pipe size is 100 mm. Consequently the fluid velocity for a flow of approximately 50m<sup>3</sup>/h will increase to approximately 3 m/s.

Using a DN80 mm MagFlux® flow sensor also leads to a smaller measurement range (3.62 m<sup>3</sup>/h - 181 m<sup>3</sup>/h).

The diagram on the right shows that reducing the pipe size from 100 to 80 mm will cause a pressure loss of 3 mbar (0.003 bar).

A MagFlux Flow Sensor with an internal diameter of 3 in. is selected and the pipe size is 4 in., the fluid velocity for a flow of approximately 220 GPM will increase to about 10 ft/s.

Using a 3 in. MagFlux flow sensor, a smaller measurement range (from 15.93 GPM to 796.9 GPM) will be available.

The diagram shows that reducing the pipe size 4 in. to 3 in. will cause a pressure loss of 0.0435psi.

## Mounting Data

Accurate flow measurement requires a minimum of three (3) pipe diameters of straight pipe upstream and two (2) pipe diameters of straight

pipe downstream from the center of the Flow Sensor.
