

Description

- The factory intake hose is constructed of weak plastic that can collapse under increased boost pressure and eventually break apart over time. The factory hose also has internal ridges which disrupt air flow.
- The MST inlet hose was engineered to increase air flow and replaces the restrictive factory hose between the air box and the inlet pipe. By removing the pleats found in the OEM inlet hose, the MST inlet hose is perfectly smooth on the inside and has a significantly larger internal diameter than the OEM part which increases air flow considerably.

Style	Inlet hose
Feature	*5-ply silicone construction *Smooth interior *Stronger than the factory ones *Larger internal diameter
Color	White, Black, Blue, Red
Condition	New
Brand	MST Performance Auto Parts
Fitment	Ford Focus 2012+ 2.0L MK3 N/A
Package Included	Silicone inlet hose
