Mist knob is switch on, no wind and mist?

Cause: Power is not connected or there is a problem on the power.

Solution: Reconnect power supply. If still unable to function, kindly contact our customer service.

Power is connected, but there is no wind and no mist?

Cause: Water level is not too low.

Solution: Fill water to water tank and re-operate. If still unable to function, kindly contact our CS.

Mist volume is low

Cause: Atomizer is not clean or water is not pure enough.

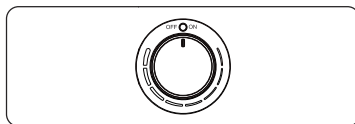

Solution: Clean the atomizer and replace with clean water.

Abnormal noise

Cause: Water level in the water tank is too low, or product is place on an unstable surface.

Solution: Add water into water tank, and place the product at a solid flat surface.

Product Instructions

1. Put the humidifier on a flat surface. Remove the water tank cover and water tank from the motor base. Fill water inside the water tank with clean water. (Reminder: Do not insert water into the mist outlet).
2. After finish filling the water, place the cover to the water tank and install back the water tank to the motor base. Connect the power plug to the socket.
3. When the mist control knob is at the on/off position, the humidifier is at standby mode. When the mist knob is switch on, the humidifier is at operating mode (red light indicates lack of water, green light indicates working).
4. When the LED light showing red light, it indicates that the humidifier is lack of water. Turn off the humidifier and refill the water to the water tank. Switch on the humidifier to start the machine.
5. When the LED light is showing green light, it indicates that the humidifier is operating. Adjust the mist level by switching clockwise and counterclockwise.
6. Turn the mist knob clockwise to adjust the mist level from lowest level to highest level, turn the mist knob counterclockwise to adjust the mist level from highest level to lowest level. Turn back to the on/off position to off the humidifier.

Note: When the temperature is too low or the humidity is too high, the mist cannot fully spread to the air, recommend to adjust the mist volume to low level.

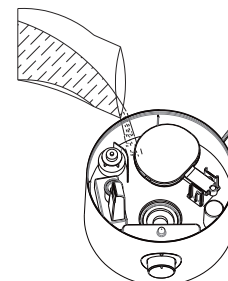

Cleaning and Maintenance

Water Tank and Motor Base

Use a clean cloth to wipe the water tank and motor base as figure.

Motor Base and Mist Atomizer

Add detergent powder (for humidifier) with clean water to wash the motor base area. Rinse with clean water and leave it dry.

NOTE:

- * Remember to unplug the power plug before any cleaning or maintenance.
- * Do clean the dirt and stain at the water tank mist tube and motor base of humidifier regularly, recommend once a week or every 2 days if using essential oil or sanitizer.
- * Never use other chemical acids, enzymes or detergents, as it may risk poisonous gas to be created or cause malfunction.
